

DeleteEnhMetaFile

The **DeleteEnhMetaFile** function deletes an enhanced-format metafile or an enhanced-format metafile handle.

```
BOOL DeleteEnhMetaFile(  
    HENHMETAFILE hemf    // handle of an enhanced metafile  
);
```

Parameters

hemf
Identifies an enhanced metafile.

Return Value

If the function succeeds, the return value is TRUE.

If the function fails, the return value is FALSE.

Remarks

If the *hemf* parameter identifies an enhanced metafile stored in memory, this function deletes the metafile. If *hemf* identifies a metafile stored on a disk, the function deletes the metafile handle but does not destroy the actual metafile. An application can retrieve the file by calling the **GetEnhMetaFile** function.
