

GetBitmapDimensionEx

The **GetBitmapDimensionEx** function retrieves the dimensions of a bitmap. The retrieved dimensions must have been set by the [SetBitmapDimensionEx](#) function. The **GetMapDimensionEx** function replaces the **GetMapDimension** function.

```
BOOL GetBitmapDimensionEx(  
    HBITMAP hBitmap,          // handle of bitmap  
    LPSIZE lpDimension        // address of structure receiving dimensions  
);
```

Parameters

hBitmap

Identifies the bitmap.

lpDimension

Points to a [SIZE](#) structure to receive the bitmap dimensions.

Return Value

If the function was successful, the return value is TRUE.

If the function fails, the return value is FALSE. To get extended error information, call [GetLastError](#).

Remarks

The function returns a data structure that contains fields for the height and width of the bitmap. If those dimensions have not yet been set, the structure that is returned will have zeroes in those fields.
