

GetStretchBltMode

The **GetStretchBltMode** function retrieves the current stretching mode. The stretching mode defines how color data is added to or removed from bitmaps that are stretched or compressed when the [StretchBlt](#) function is called.

```
int GetStretchBltMode(  
    HDC hdc           // handle of device context  
);
```

Parameters

hdc
Identifies the device context.

Return Value

If the function succeeds, the return value is the current stretching mode.

If the function fails, the return value is zero.
